

SOP INSTALASI OPENCV-GPU PADA WSL2 UBUNTU

SOP ini mengacu pada artikel berikut <https://medium.com/@pydoni/how-to-install-cuda-11-4-cudnn-8-2-opencv-4-5-on-ubuntu-20-04-65c4aa415a7b>

1. Pastikan Cuda dan cuDNN telah terinstal baik pada WSL2 maupun pada Windows seperti yang telah dijelaskan pada SOP Instalasi Tensorflow-gpu menggunakan WSL2.

2. Cek Cuda Version

```
nvidia-smi
```

```
nvcc --version
```

3. Cek apakah cuDNN telah terdeteksi atau belum, ketikkan command berikut

```
whereis cudnn
```

Jika path cuDNN tertampilkan maka cuDNN telah berfungsi.

4. Install library yang dibutuhkan

```
sudo apt-get update
```

```
sudo apt-get upgrade
```

```
sudo apt install cmake pkg-config unzip yasm git checkinstall libjpeg-dev libpng-dev  
libtiff-dev libavcodec-dev libavformat-dev libswscale-dev libavresample-dev  
libgstreamer1.0-dev libgstreamer-plugins-base1.0-dev libxvidcore-dev x264 libx264-dev  
libfaac-dev libmp3lame-dev libtheora-dev libfaac-dev libmp3lame-dev libvorbis-dev  
libopencore-amrnb-dev libopencore-amrwb-dev
```

```
sudo apt-get install libdc1394-22 libdc1394-22-dev libxine2-dev libv4l-dev v4l-utils
```

```
cd /usr/include/linux
```

```
sudo ln -s -f ../libv4l1-videodev.h videodev.h
```

```
cd ~
```

```
sudo apt-get install libgtk-3-dev libtbb-dev libatlas-base-dev gfortran
```

5. Unduh opencv.zip dan opencv_contrib.zip versi dapat disesuaikan dengan kebutuhan pengguna

```
cd ~/Downloads
```

```
wget -O opencv.zip https://github.com/opencv/opencv/archive/refs/tags/4.5.2.zip
```

```
wget -O opencv_contrib.zip https://github.com/opencv/opencv_contrib/archive/refs/tags/4.5.2.zip
```

```
unzip opencv.zip
```

```
unzip opencv_contrib.zip
```

6. Buat folder build

```
cd opencv-4.5.2
```

```
mkdir build
```

```
cd build
```

7. Gunakan cmake untuk mem-build package opencv

Sesuaikan CUDA_ARCH_BIN=X.X sesuai dengan versi GPU pengguna informasi lebih jelas dapat mengakses laman berikut

Jika tidak akan menggunakan virtual environment pada bagian OPENCV_PYTHON3_INSTALL_PATH dapat diganti dengan path direktori folder

Python pada computcmake -D CMAKE_BUILD_TYPE=RELEASE \

```
-D CMAKE_INSTALL_PREFIX=/usr/local \
```

```
-D WITH_TBB=ON \
```

```
-D ENABLE_FAST_MATH=1 \
```

```
-D CUDA_FAST_MATH=1 \
```

```
-D WITH_CUBLAS=1 \
```

```
-D WITH_CUDA=ON \
```

```
-D BUILD_opencv_cudacodec=OFF \
```

```
-D WITH_CUDNN=ON \
```

```
-D OPENCV_DNN_CUDA=ON \
```

```
-D CUDA_ARCH_BIN=X.X \
```

```
-D WITH_V4L=ON \
```

```
-D WITH_QT=OFF \
```

```
-D WITH_OPENGL=ON \
```

```
-D WITH_GSTREAMER=ON \
```

```
-D OPENCV_GENERATE_PKGCONFIG=ON \
```

```
-D OPENCV_PC_FILE_NAME=opencv.pc \
```

```
-D OPENCV_ENABLE_NONFREE=ON \
```

```
-D OPENCV_PYTHON3_INSTALL_PATH=~/.virtualenvs/cv/lib/python3.8/site-packages \
```

```
-D PYTHON_EXECUTABLE=~/.virtualenvs/cv/bin/python \
```

```
-D OPENCV_EXTRA_MODULES_PATH=~/.Downloads/opencv_contrib-4.5.2/modules \
```

```
-D INSTALL_PYTHON_EXAMPLES=OFF \
```

```
-D INSTALL_C_EXAMPLES=OFF \
```

```
-D BUILD_EXAMPLES=OFF ..er. Begitu pun dengan PYTHON_EXECUTABLE
```

8. Setelah itu, ketikkan berikut

```
nproc # to know how much cores do you have
```

```
make -jx #where x is the number of cores, if not sure use -j4
```

```
sudo make install
```

9. Setelah instalasi selesai ketikkan command berikut

```
sudo /bin/bash -c 'echo "/usr/local/lib" >> /etc/ld.so.conf.d/opencv.conf'
```

```
sudo ldconfig
```

10. Buka Python terminal kemudian ketikkan

```
import cv2
```

```
print(cv2.getBuildInformation())
```
